Clustering MD File Review:

1. for the clustering - is it better if we take only since 2021?
 2. can we look at entry points of batters on average and then see where they end up starting their innings
 3. need to look at wickets also across phases, i only see boundary pct and dot ball pct and economies
 4. Can look at overall population and then decide sample size requirements
 5. Low key item but aim for 50% variance explanation
 6. look at things like boundary/ball metric for batters - probably overlaps with boundary %
 7. MS Dhoni is pretty good in the death, often termed a finisher also.
 8. I have seen Jos Buttler batting at the top of the order more often in the last 6-7 years although he has been termed a finisher. Patidar, Pant, Surya are also guys who bat at 1-4 more often than not and then go berzerk.
 9. Nortje isnt a part timer, re-think this
