

## Founder Review #2

### a) Experience Squad CSV

1. Aman Khan stats are wrong. Bowling isnt his. I think you pulled in Avesh Khan instead of him
2. Shahrukh Khan is still wrong with the IPL Stats. he has 49 innings, 732 runs, 491 balls for example
3. Rasikh Dar has played in the IPL, he played in 2025 for RCB too. Look at that again and map correctly
4. Possible to cross-verify stuff from Cricbuzz and identify the mismatches, if they are small then its ok and manageable

### b) Scope:

1. Average Entry Point isnt just average, probably median or mode would be better. Even granular could be the entry point in terms of balls. Let's say for an opener - entry point would be 0.0. If a batter batting at 3 comes in after a wicket falls at 4.4, his entry point would be 4.5 overs or 29th ball of the innings. Similarly, can do this for the bowlers also in terms of when they usually bowl their first, second, third and fourth overs in terms of frequency or any solid methodology.
2. in bowler handedness, look at wickets aspect and strike rate too
3. for batters also - it would be nice to get things like vulnerable against left arm spin, vulnerable against off-spin, specialist against pace etc. can see match-ups from this ideally
