

Founder Review #3

1. What does LHB Pressure, RHB pressure mean?
2. I also want to do a Phase wise classification saying powerplay beast, death overs liability etc etc for bowlers
3. Aiden Markram - intuitively isnt that great against left arm spin but youve labelled him as a specialist. Dont just look into pure run numbers and quantity. I want you to look at quality also. Not sure if the batter v bowler match is done seperately for each type of spinner too. Probably best to check global averages also instead of just outright ones. As per batter_bowling_type_detail - Markram has gotten out eight times to left arm spin in 110 balls, which actually seems high.
4. whats the time frame for these batter entry points and batter bowling type csv outputs
5. bowler over time - if sample size is too low, no need to give a tag.
6. in bowler over time csv - Deepak Chahar has bowled 3 overs in the powerplay which is (0-5), why is he classified as a middle overs bowler?
7. Same with Boult, he consistently bowls over 0 and 2.
8. Be thorough with the classifications for middle overs death overs and powerplay please. I dont see death overs specialist at all. Look at just where they have bowled frequently. Lasith Malinga is as good with the new ball as with the death but more reknowned for death
